

Research @ Smart and Autonomous Mobility Laboratory

Ongoing Projects

[1] **M**ulti-**A**gent **R**obot **E**cosystem (*MARE*)

[2] a**U**toma**T**ed **O**pen **P**rec**I**sion **f**arming platform (*UTOPIA*)

[3] Resource-aware Cooperative Delivery Mission Planning for UAV and UGV

MARE

Project focuses on:

- cooperative sensing, localization, control, and planning
- heterogeneous (aerial, ground, and water) multi-agent robotic systems
- utilize different sensor and hardware modalities

Application areas of interest are transportation, agriculture, automotive, and logistics applications

Project funded by: BU-BAP-STARTUP

UTOPIA

IAM | INTELLIGENT
AUTONOMOUS
MOBILITY

WAGENINGEN
UNIVERSITY & RESEARCH

University
of Antwerp

aqitec

Goal:

- Support the mass-adoption of data-rich precision-farming, while limiting the increase of labor related to:
 - ❖ manual/automated robotic & agri-equipment operation
 - ❖ fusion of the heterogeneous multi-device data

UTOPIA

Funded by the Horizon 2020
Framework Programme of the
European Union

- Nutrient management in the vineyard is essential for optimising grape growth to produce high quality grapes, in a sustainable way.
 - ❖ Minimize use of pesticides
 - ❖ Optimal water usage
- Frequent monitoring soil and leaf nutrient levels is therefore an important step to achieve this.
